EDUCATION

University of Western Ontario | HBSc, Computer Science Oct 2026

- GPA:** 3.5/4.0 | Dean's List, Entrance Scholarship (\$8K), 2026 NAYGN Continental Conference Scholarship
- Courses:** Data Structures & Algorithms, OOP, Software Architecture, Databases, Computer Networks, Statistics
- Extracurriculars:** Western Peer Leaders, Western Developers Society, Canadian Tech Summit

EXPERIENCE

NAYGN July 2025 – Present

Data & Web Specialist

- Consolidated and normalized 36+ relational tables covering membership, events, and metrics using SQL, reducing query times by 65% and enabling scalable reporting.
- Owned intake and triage of technical requests in JIRA, translating stakeholder needs into clearly scoped tickets and communicating status in biweekly team huddles.
- Integrated WordPress pages with the consolidated SQL tables to serve live membership and event data, providing key figures presented at the NAYGN Continental Conference to 400+ attendees.

Ontario Power Generation Inc. Sept 2023 – Sept 2024

Software Developer

- Rebuilt safety reporting app (TPI) with React and ASP.NET Core, adding tagging, tracking, and trending for 1,000+ monthly station condition reports, adopted across 6 departments.
- Co-developed Python-based analytics (pandas, statsmodels) for TPI, including a daily/weekly Safety Culture Index, department-level seasonality decomposition, and trend detection for gradual safety degradation.
- Refactored 50+ views and stored procedures in T-SQL (SQL Server), resolving slow queries and production defects and delivering new views for application teams.
- Delivered Power BI and Python (Plotly) dashboards tracking safety and training targets across 30+ station divisions, supporting leadership review ahead of a Canadian Nuclear Safety Commission audit.

PROJECTS

Grid Without Nuclear — Counterfactual Data Analysis (Live Dashboard) (GitHub)

- Designed an ELT data pipeline and dashboard processing 96,000+ IESO records, using SQL-based data modeling to quantify nuclear energy's grid impact — finding \$50.6B in consumer savings & 330.6Mt CO2 avoided.
- Technologies:** *Python, PostgreSQL, dbt, Apache Airflow, Docker, Streamlit, Plotly, Claude Code*

DSA Snippets — VSCode Extension (VSCode Marketplace) (GitHub)

- Developed and shipped an extension delivering 65+ Data Structures & Algorithms snippets, achieving 2,000+ installs and improving developer productivity for technical interview prep.
- Technologies:** *JavaScript, Java, JSON*

NPM Dependency Tree Visualizer (Live App) (GitHub)

- Built a Vue.js/TypeScript app that visualizes npm dependency trees and detects deprecated packages, supported by automated Jest unit tests achieving 80% code coverage.
- Identified client-side graph building as the bottleneck and migrated to a serverless AWS backend with a DynamoDB cache, provisioned with AWS CDK, cutting build time from 2.5s to 80ms.
- Technologies:** *TypeScript, Vue.js, AWS (Lambda, DynamoDB, CDK), Jest, GitHub Actions*

SKILLS

Languages	Python, Java, C, SQL, JavaScript, TypeScript, HTML/CSS, Bash, R
Frameworks / Libraries	React, Vue.js, Node.js, ASP.NET Core, Jest, pandas, NumPy, Streamlit
Cloud / DevOps	AWS (Lambda, DynamoDB, CDK), Docker, GitHub Actions, Git, Azure DevOps
Data / Tools	dbt, Apache Airflow, JIRA, Power BI, Excel

LEADERSHIP

Western University Sept 2024 – Feb 2025

Western Peer Leader (WPL) – Learning Peer, Computer Science

- Mentored 12 first-year Science students through weekly 1-on-1 sessions, building individual study plans and connecting them to academic support resources.
- Delivered 3 Zoom exam-prep workshops on recursion, linked lists, and OOP principles, reaching 150+ total attendees.
