

EDUCATION

University of Western Ontario — HBSc, Computer Science

Aug 2026 (Expected)

- **CGPA: 3.5/4.0** — Dean's List
- Relevant Courses: Data Structures & Algorithms, Object-Oriented Programming, Software Arch., Computer Networks
- Extra Curriculars: Western Developers Society, Canadian Tech Summit, Western Ski & Snowboard Club
- 2026 NAYGN Conference Scholar (sponsored by Westinghouse Electric Company)

Toronto Metropolitan University — HBSc, Computer Science Co-op

Sept 2021 – Sept 2024

- **CGPA: 3.93/4.33 (91%)** — Dean's List, Ryerson Scholar (\$8000)

EXPERIENCE

NAYGN — Data & Web Specialist

July 2025 - Present

- Redesigned **36+ relational databases** supporting membership, event, and metrics tracking, improving reporting scalability and query performance.
- Implemented front-end improvements across **100+ web assets** using PHP and JavaScript while applying SEO optimizations to increase discoverability and engagement.
- Supported outreach initiatives reaching **75+** student participants by providing technical infrastructure for webinars and digital programming.

Ontario Power Generation Inc. — Software Developer Co-op

Sept 2023 – Sept 2024

- Automated **1,000+ monthly nuclear station condition reports** by rebuilding an internal safety reporting system in React, reducing manual processing and accelerating incident visibility for operations teams.
- Refactored and optimized **50+ SQL views and stored procedures**, resolving production data issues and improving performance across multiple station databases.
- Delivered data insights across **50+** station divisions by transforming internal feedback datasets into interactive dashboards supporting safety improvement initiatives.
- Built **Python analytics dashboards (Streamlit, Plotly)** used during a **Canadian Nuclear Safety Commission audit**, enabling leadership to visualize operational trends and compliance metrics.

PROJECTS

Grid Without Nuclear — Counterfactual Energy Analysis

(Live Dashboard) (GitHub)

- Designed an ELT data pipeline and dashboard processing **96,000+** IESO hourly records, using SQL-based data modeling to quantify nuclear energy's grid impact — finding **\$50.6B** in consumer savings & **330.6M tonnes CO2** avoided.
- Validated the model against documented Ontario nuclear refurb and outage windows, predicting actual energy prices within **16%** average error, with a **+0.90** correlation confirming the underlying mechanism.
- **Technologies:** Python, PostgreSQL, dbt, Apache Airflow, Docker, Streamlit, Plotly

DSA Snippets - VSCode Extension

(VSCode Marketplace) (GitHub)

- Developed and shipped a VS Code extension delivering **65+** Data Structures & Algorithms snippets, achieving **2,000+** installs and improving developer productivity for technical interview prep.
- **Technologies:** JavaScript, Java, JSON

Travel Flights Microservices System

(GitHub)

- Collaboratively architected a travel-booking application using a microservices model, featuring service registry, Redis caching, load balancing, health checks, and containerized deployment that models industry-scale systems.
- **Technologies:** Python, Flask, React, Docker, MySQL, Redis, AWS EC2

NPM Dependency Di-Graph Visualizer

(Live App) (GitHub)

- Built a full-stack app to visualize NPM dependency graphs and detect deprecated packages, supported by automated Jest unit testing and a CI/CD pipeline to streamline software dependency management.
- **Technologies:** Vue.js, TypeScript, Jest, GitHub Actions

SKILLS

Languages

Java, Python, TypeScript, JavaScript, SQL, C, HTML/CSS, Shell

Frameworks/Libraries

React, Vue, Node, Flask, PostgreSQL, MySQL, Power BI

Developer tools

Docker, GitHub Actions, Redis, dbt

Concepts

OOP, REST APIs, Microservices Arch., CI/CD, DBMS, ETL/ELT Pipelines
